Sustainable Development is a broad, cross-sectoral industry spanning both vendors and end-user companies and businesses in Transport & Logistics, Building & Construction, Banking & Finance, Commerce & Retail, ICT & Communications, Services & Hospitality, Food & Beverages & Tourism, and Manufacturing, and cover areas including:

- Green Logistics & Supply Chain
- Clean/Renewable Energy
- Green Manufacturing
- Green Services & Retail
- Sustainable Business Practices
- Environmental & Resources Management, etc.
- Energy Efficiency
- Green Finance
- Green IT

The Industry Networking series is SBF's initiative to build up the community of companies and professionals from the industry, creating an active, vibrant network to share and exchange knowledge and expertise in sustainable development.

Who should attend: SBF members as well as senior management & C-level personnel from businesses and organizations in this industry.

Keynote Synopsis - Creating successful sustainability initiatives require effective strategies in material selection; sourcing policies; resource consumption and emissions; end-of-life (EOL) postponement and management; and, customer and demand fulfillment. Putting the Triple Bottom Line - People, Planet and Profits - in the business context requires understanding of the drivers that underscore sustainability initiatives today. As companies seek to become greener, various stages of maturity in the product life-cycle economics and the supply chain are fundamental to prioritizing projects, making trade-offs, and measuring success.

Come hear about the latest findings and overview on how manufacturers' IT and business organizations -- including supply chain, engineering, operations, and more -- are addressing sustainability issues today and as they mature over time. These trends in sustainability programs not only reduce risks and costs but also increase revenue and profits as well as enhance competitive positioning.
