

SEMBCORP SOLAR - CASE STUDIES

Rooftop Solar Solution for Halliburton

Halliburton is one of the world's largest providers of products and services to the energy industry. Their shared corporate mission is to reduce the industry's carbon footprint and to be responsible stewards of the environment. To assist in achieving this goal, the company looks for energy-efficient technologies to use across all areas of its business.

By working with Sembcorp, Halliburton had solar panels installed at its three buildings located at Tuas and Jalan Ahmad Ibrahim. The Tuas facility is one of Singapore's largest rooftop solar PV systems. The solar panels can help minimise environmental impact in their daily operations, reduce brown energy consumption and achieve immediate cost savings.

Our Solution

Sembcorp's Solar PV System is backed by a centralised digital platform that remotely monitors data of Sembcorp's fleet of solar systems in Southeast Asia in real-time, enabling the operations and maintenance team to have enhanced visibility for swift deployment to specific sites when needed.

System Information

Location	11 Tuas South Ave 12	315 Jalan Ahmad Ibrahim
System Size	4,723 kWp	1,595 kWp
Completion Date	26 April 2019	11 April 2019

Green Benefits
