

Dear Members & Partners

Our Newsletter is yet another way for us to bring you information and keep you connected to the world of sustainable energy in Singapore and beyond. In this issue of the SEAS Newsletter, we focus on news and insights into energy efficiency and how the industry is moving forward.

We would like to congratulate our new council for 2014-2016 and look forward to working with them to take SEAS to greater heights. Our Council is the guiding force behind the strategic direction that the association takes and we are very fortunate to have a group of industry leaders at the helm, who spend many hours on a voluntary basis to help & support the association and industry.

Another highlight is the MOU between SEAS and Jurong Town Corporation (JTC) with an objective to support JTC to make the JTC buildings more sustainable. This would give opportunities to our member companies to testbed and if suitable implement their technologies in many buildings in Singapore. A very unique partnership between a government Agency and an Association which we hope will promote innovative technologies and ideas in our space.

SEAS is also pleased to present our brand new infographic which you can view here. It deftly captures SEAS member benefits and the services we provide to develop the sustainable energy industry in Singapore. Please do reach out to us if you have any ideas on features or stories for the newsletter.

Warm Regards
Kavita

Demand Response - the smart efficient energy

The Singapore government has recognised the role that demand response can play in managing Singapore's energy use, and a demand response programme will be implemented in 2015.
