

SEAS Newsletter Jun'14

Energy Efficiency FOCUS - Moving forward to the future

In this issue of the SEAS Newsletter, we focus on news and insights into energy efficiency and how the industry is moving forward.

Check out our business mission report to Bangkok, where our members got to meet some Thai companies and visit an Energy Efficient building. We also have some interesting insights from our AGM panel discussion—a special feature at the AGM this year instead of just the usual AGM proceedings. SEAS signed an MOU with JTC to work on making JTC buildings more sustainable. This would give more opportunities to our member companies to implement their technologies in many buildings in Singapore.

Click on the boxes to read more.

Yours Sincerely, **SEAS Team**

Demand Response Technology in Singapore

Demand Response technology is relatively new to many people, however it has the potential to generate a large amount of potential to generate a large amount of savings. The Singapore government has recognised the role that demand response can play in managing Singapore's energy use, and a demand response programme will be implemented in 2015.
